

INTERNSHIP – TECHNOLOGY INTERN

There's quite a lot of code sitting behind the Boat Register and the Members Area. If you've already done some coding, we'd love some help. If you haven't but you'd like to know how things work and see if you like it that's great.

It's hard to talk about tech without name dropping technologies, so here we go:

React javascript html css jsx graphql python aws github jest geolocation maps vite typescript cloud

If you are just starting out, we can show you how to set up your own project and make use of lots of free resources to create a website.

If that's a bit old, we can go into depth about how we use different technologies to deliver things members want securely.

And if you have an idea about making the site do something new, we can help you make that happen.

The internship will be virtual and can be tailored around existing commitments.
